## INTRODUCTION

This annual revision of Transportation Series 4 contains information on the vessel operators and their American flag vessels operating or available for operation on 31 December 1980 on the Mississippi River System and the Gulf Intracoastal Waterway in the transportation of freight and passengers. General ferries,\* floating equipment used in construction work such as dredges, piledrivers, and flats; fishing vessels; and recreational craft are not included. The Series, which also includes Number 3, Transportation Lines on the Great Lakes System and Number 5, Transportation Lines on the Atlantic, Gulf, and Pacific Coasts is prepared under authority contained in the River and Harbor Act approved 22 September 1922.

The names of the vessel operators are listed alphabetically in Table 1. Each line carries Engineer

District number and the name and business address of the operator.

Table 2 lists the operators in alphabetical sequence and describes each vessel operated by indicating its net register tonnage, register and overall lengths, register and overall breadths, draft (both loaded and light), horsepower, carrying capacity in short tons or units of cargo and number of passengers, heights of fixed superstructures, cargo handling equipment, vessel operating base, and year built or rebuilt.

Table 3 lists the type of service, principal commodities carried, the points or localities, and waterways between which or upon which the services are conducted.

Information was obtained by means of a questionnaire by the District and Division Engineer offices of the Corps of Engineers, U. S. Army, with each Engineer office accounting for the operators whose main operating headquarters were located within its jurisdiction on 31 December 1980. The final report, following editing and collation of input data furnished by operators, was compiled and copy preparation accomplished in the Waterborne Commerce Statistics Center.

\* A general ferry is one which conveys passengers and vehicles (driven on and off the vessel) across a river or other narrow body of water (strait, inlet, etc.). General ferries will not be included in the Transportation Series unless they are regulated by the FCC or transports cargo and submits vessel operation reports.

For filing  
in the  
Engineering Office  
of the District Engineer  
for the  
District

A

### EXPLANATION OF TERMS AND SYMBOLS

The terms, "regulated by Interstate Commerce Commission (common or contract)," "exempt, for hire," and "private," as used in the "Service" column in Table 3, apply to the operators of the vessels rather than to the vessels.

An entry of "-5" in the "Net Register Tonnage" column of Table 2, Description of Vessels, identifies vessels of less than 5 net register tons.

An asterisk (\*) appearing in "When Built or Rebuilt" column of Table 2 indicates the year in which the vessel was rebuilt. Where no asterisk appears, the reference is to the year in which the vessel was originally constructed.

The index and tables show Engineer Division/District in which the report was received by number as follows:

- |                         |                       |                       |
|-------------------------|-----------------------|-----------------------|
